Security Scan Report

Executive Summary

This report summarizes a security scan of the GitHub repository: https://github.com/digininja/DVWA.git. We found 74 potential security issues. Breakdown: 6 Critical, 68 High, 0 Medium, 0 Low, 0 Informational issues.

Overall Risk Assessment

Risk Score: 81.6/100 (Critical Risk)

What We Found

Critical Severity Issues (6)

File	Line	Issue	Context
dvwa/js/dvwaPage.js	7	Use of eval() - Potential code injection risk	//eval("page" + id + " = window.open(URL, '" + id + "', 'too...
vulnerabilities/view_help.php	20	Use of eval() - Potential code injection risk	eval('?>' . file_get_contents(DVWA_WEB_PAGE_TO_ROOT . "vul...
vulnerabilities/view_help.php	22	Use of eval() - Potential code injection risk	eval('?>' . file_get_contents(DVWA_WEB_PAGE_TO_ROOT . "vul...
vulnerabilities/javascript/source/high.js	1	Use of eval() - Potential code injection risk	var a=['fromCharCode','toString','replace','BeJ','\x5cw+','L...
vulnerabilities/javascript/source/high_unobfuscated.js	83	Use of eval() - Potential code injection risk	var crypto = eval("require('crypto')");
vulnerabilities/javascript/source/high_unobfuscated.js	84	Use of eval() - Potential code injection risk	var Buffer = eval("require('buffer').Buffer");

High Severity Issues (68)

File	Line	Issue	Context
security.php	13	Unfiltered POST parameter - Injection risk	if(isset($_POST['seclev_submit'])) {
dvwa/includes/dvwaPage.inc.php	108	Unfiltered POST parameter - Injection risk	if (array_key_exists ("Login", $_POST) && $_POST['Login'] ==...

What You Can Do

• Avoid using risky functions like 'eval()' that can run harmful code.
• Keep passwords and secrets out of your code—use secure storage instead.
• Run this scan regularly to catch issues early.
• Ask your team to follow safe coding habits.

Note: This tool is very thorough, but it's always a good idea to have an expert double-check important systems.
